

SATELLITE BROADBAND REACHES MORROCH BAY – June 2009

Both cottages at Morroch Bay now benefit from wireless satellite broadband.

Take advantage of the peace and isolation of this exclusive & remote bay in South West Scotland whilst maintaining contact with the outside world through wireless satellite broadband. Extended 'off-season' breaks considered.

Around 2000 previously unconnected homes and businesses in Scotland can now access broadband internet using satellite and wireless technology. £3.5 million has been invested by the Scottish Broadband Reach Programme to connect remote broadband black spots.
